The exact reference is displayed for incorrect answers

1. According to EPA's *Building Air Quality*, which of the following statements best characterizes the usefulness of a Material Safety Data Sheet in building IAQ Management?
- A. A MSDS provides a comprehensive summary of the impact on IAQ for the material in question.
 - B. A MSDS may be of limited help in identifying some products that could pose IAQ concerns.
 - C. A MSDS is an authoritative guide to the identity of significant airborne contaminants related to the material in question.
 - D. A MSDS does not address IAQ specifically and is therefore of little value to the building IAQ manager.
